I Introduction

GLIC Studio is a program to create, schedule and send messages to our LED displays.

II Installing the Software

1. Make sure you have administrative privilege or login before you install the program for window 2000 or XP user.
2. Put the installation CD into the CD rom
3. Browse your CD rom drive by clicking into “My Computer” on your Desktop or Start menu.
4. Double click into CD rom.
5. Double click on GLIC_Studio
6. Click Next, it will ask what folder you want it to save to. Leave the default setting.
7. It will start the installation and the shortcut button will be automatically showing on your desktop.

III. Connecting the Sign With Computer

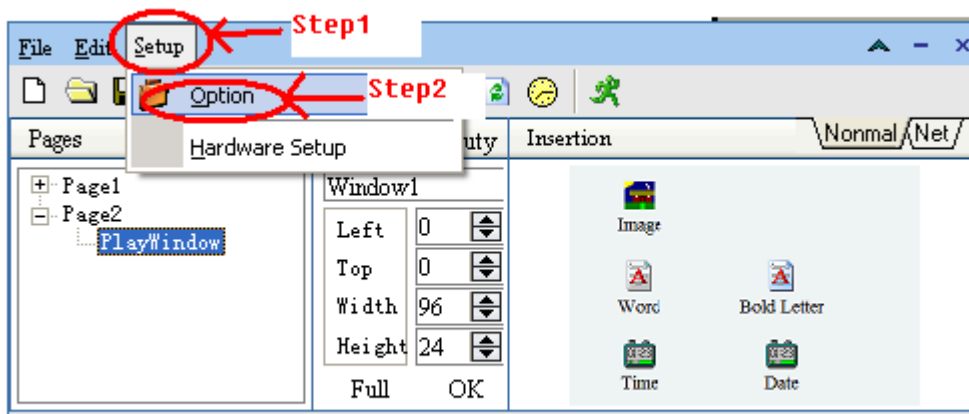

You can directly to connect the sign with the computer if you have available serial port on your computer. If you don't have any available serial port on your computer, then you need to have a USB to serial converter. After you plug your USB on your computer with the serial cable, you will have to install the driver that comes with the package on a floppy disk, and look for the ‘Com’ port. Then, using USB converter to connect the sign with your computer.

IV Setting up Communication and Sign Configuration

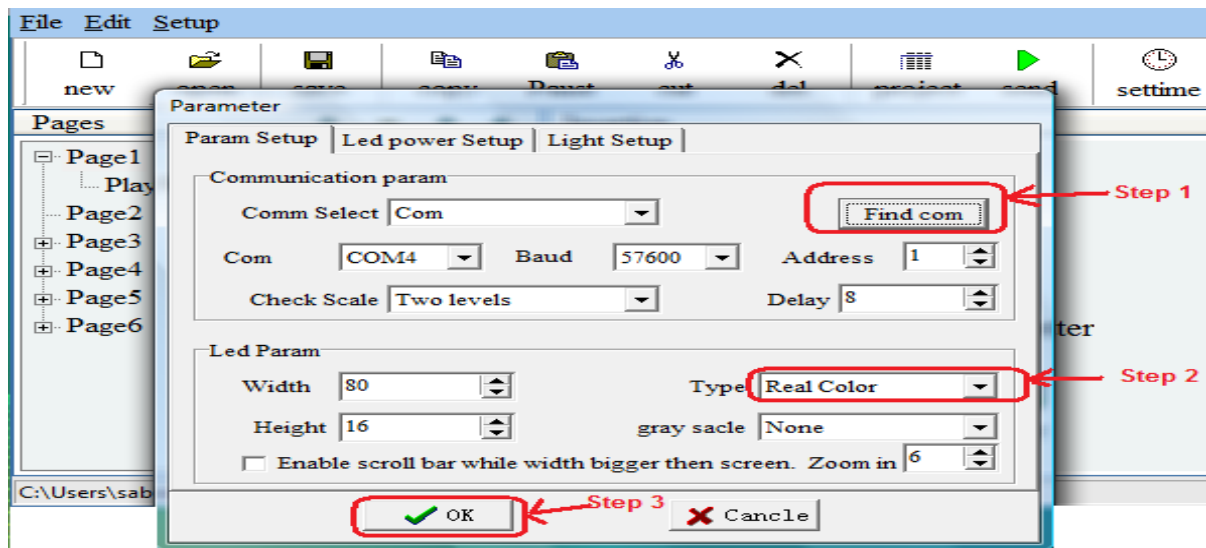

- 1.. *Open the software on your desktop*

2. *Go to “Setup” – “Option”, page Parameter is open.*

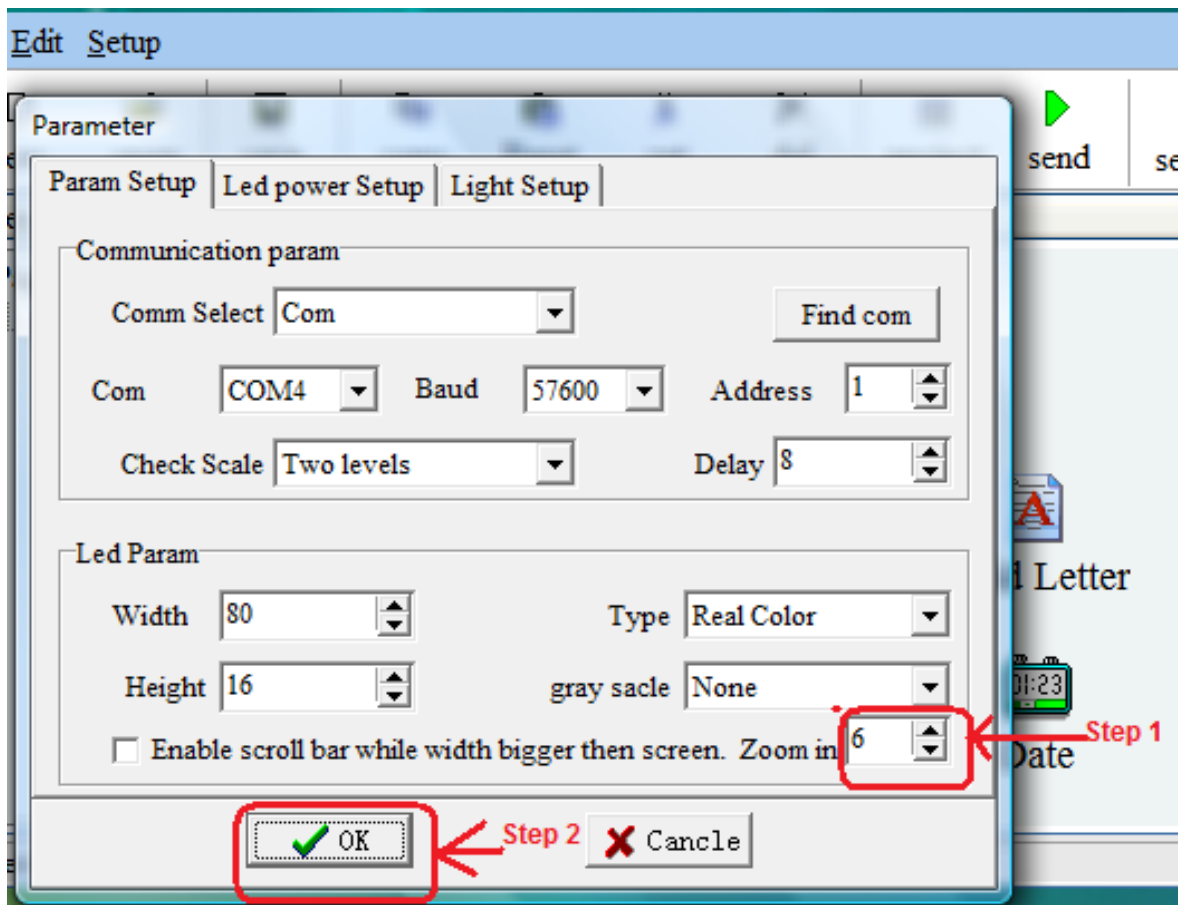

3. Click 'Find Com', wait, then the computer will be automatically connected with the Sign. Go to 'Type', Select 'Real Color' for Full Color Window Sign or select "Red /Double" for Tri Color Window Sign,. Then Click 'Ok'

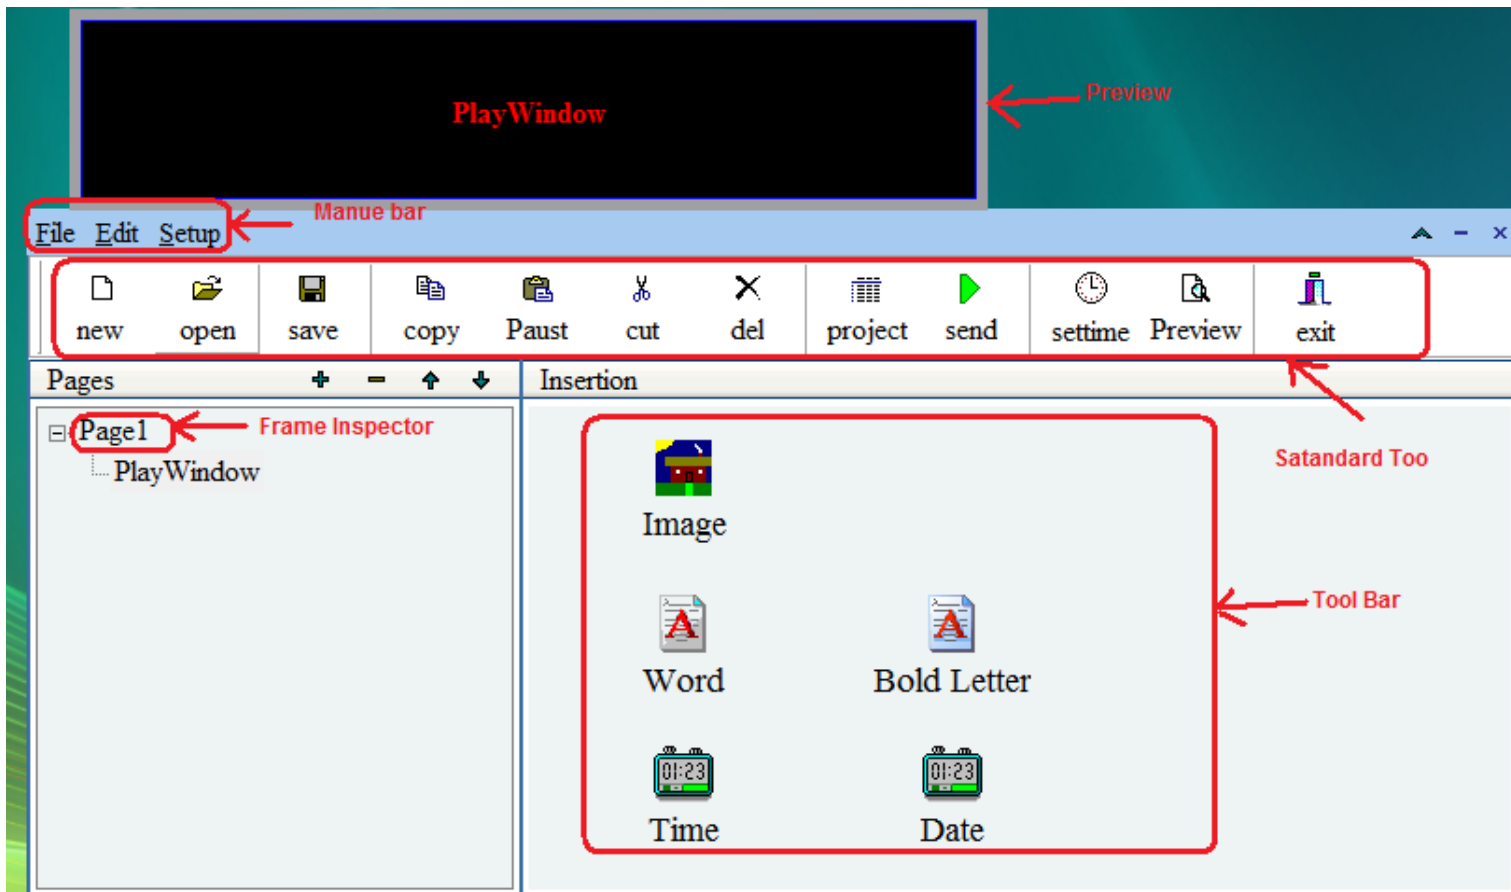

4. You can change the size of 'Play Window'.

Go to 'Type', Change 'Zoom' from 1 to 10. Then you can use your mouse to make Play Window wider and Longer

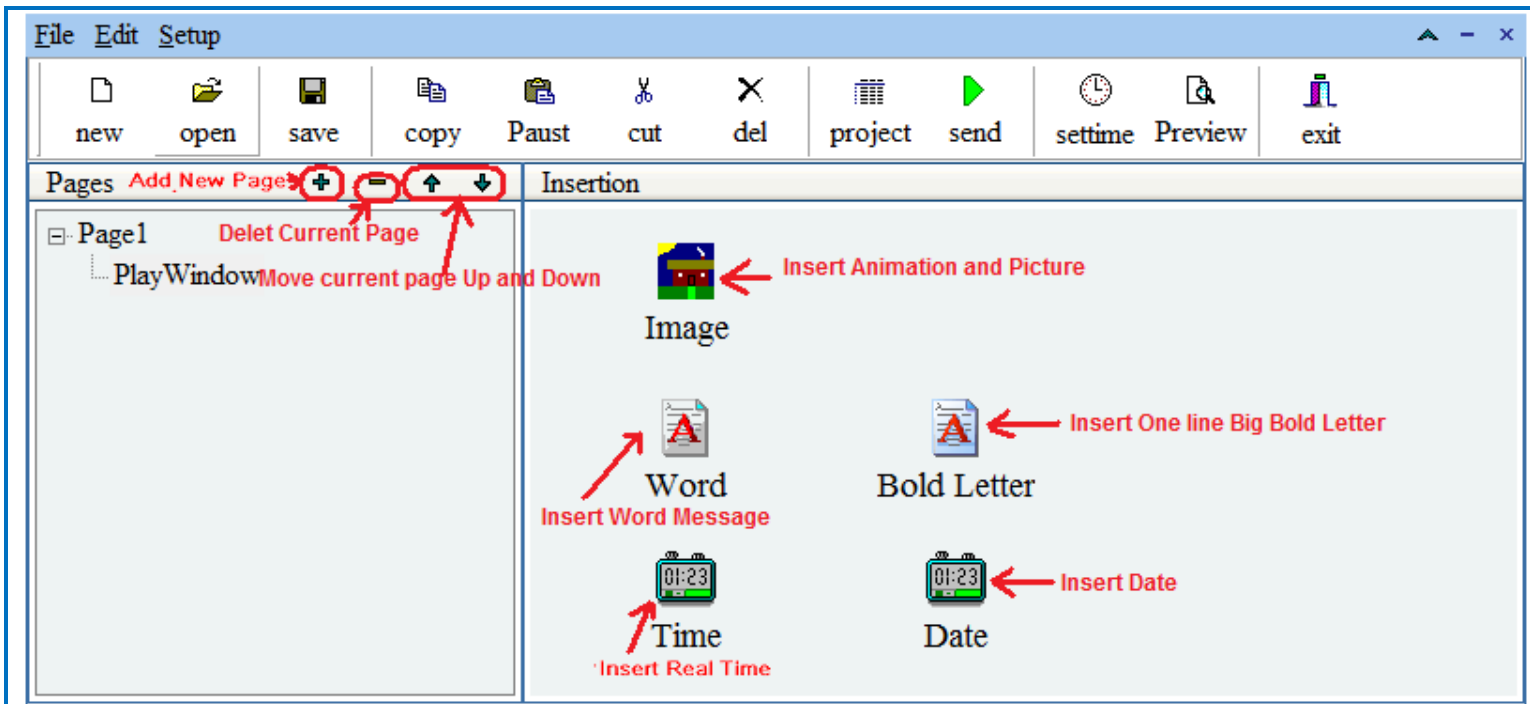

V Starting the Program

Go to “Start” – “Program Files” – “GLIC Studio” – “GLIC Studio” (or the “GLIC Studio” shortcut on your Desktop).
